

NAME

curl_easy_getinfo - extract information from a curl handle

SYNOPSIS

```
#include <curl/curl.h>
```

```
CURLcode curl_easy_getinfo(CURL *curl, CURLINFO info, ... );
```

DESCRIPTION

CURLINFO_PROXYAUTH_AVAIL

Pass a pointer to a long to receive a bitmask indicating the authentication method(s) available for your proxy authentication. (Added in 7.10.8)

CURLINFO_OS_ERRNO

Pass a pointer to a long to receive the errno variable from a connect failure. (Added in 7.12.2)

CURLINFO_NUM_CONNECTS

Pass a pointer to a long to receive how many new connections libcurl had to create to achieve the previous transfer (only the successful connects are counted). Combined with CURLINFO_REDIRECT_COUNT
